PROFILE

Quantitative sociologist and survey methodologist working across two connected strands: substantive research on gender, work, and social attitudes, and methodological research on survey measurement and inference. My research uses large-scale cross-national and panel data and advanced quantitative methods to examine how social inequalities are measured and experienced. I have extensive experience in R and Python, multilevel and latent-variable modelling, longitudinal and panel data analysis, and independent collaborative research.

RESEARCH INTERESTS

Gender inequality, work and social attitudes; flexible work, work–family conflict and well-being; survey methodology and measurement error; longitudinal and panel research; advanced quantitative methods, including multilevel, latent-variable and mixture models, machine learning, text analysis, and simulation.

EMPLOYMENT

2022–2025 **Lecturer**, Renmin University of China
Department of Sociology and Demography

- Conducted research on gender attitudes using large-scale Chinese social survey data, developing latent-variable and mixture models to distinguish underlying attitudes from survey response processes; published in *Sociological Methods & Research* (2025).
- Contributed to the Chinese General Social Survey, a national probability survey, including questionnaire development and methodological work on survey design and measurement.
- Led a National Social Science Fund of China project as Principal Investigator, examining measurement error and response quality in web surveys through questionnaire design, online data collection, and statistical analysis.
- Taught quantitative research methods and R programming; supervised undergraduate and graduate research projects in sociology.

2020–2021 **Research Assistant**, KU Leuven
Centre for Sociological Research (CeSO)

- Developed multivariate and nonparametric statistical methods for monitoring response quality and detecting irregular patterns during survey data collection; published in the *Journal of Official Statistics* and *Journal of Survey Statistics and Methodology*.
- Presented this work at the NPSO Innovatiedag hosted by Statistics Netherlands (CBS), receiving the Innovation Prize.

EDUCATION

- 2015–2021 **Ph.D. in Social Sciences**, KU Leuven, Belgium
Centre for Sociological Research (CeSO)
Dissertation: *The Use of Control Charts to Monitor and Manage Survey Data Collection Process from the Perspective of Measurement Errors*
- 2011–2013 **M.Sc. in Statistics**, Stockholm University, Sweden
- 2009–2012 **M.A. in Economics** (Major in Statistics), Renmin University of China
- 2005–2009 **B.A. in Economics** (Major in Statistics), Xiamen University, China

WORKING PAPERS

- Jin, Jiayun, & Zhang, Yang. *Listening to Silence: Gendered Patterns in the Expression of Traditional Gender Attitudes*. Working paper, 2026.

SELECTED PROJECTS

Gender, Flexible Work and Well-being in the 2024 European Working Conditions Survey (EWCS)

Analysis of 36,644 respondents across 35 countries examining gender differences in working from home, schedule control, and access to short-notice time off, and using multilevel models to assess associations with work–family conflict and well-being.

LISS Panel Quality & Representativeness

Longitudinal analysis of panel composition, participation and attrition across waves, including variable harmonisation, retention and exit modelling, and benchmarking against Statistics Netherlands (CBS) population statistics.

Non-Probability Survey Inference

Simulation study of calibration, doubly robust, and machine-learning-assisted estimators under varying selection mechanisms.

OpenCodebook

Reproducible Python workflow for coding open-ended survey responses using structured codebooks and local language models.

GRANTS

2023–2027	National Social Science Fund of China (NSSFC) Principal Investigator · Measurement Error and Data Quality in Online Surveys
2023–2024	Renmin University Faculty Start-Up Grant Principal Investigator · Measurement Error in Online Surveys

TEACHING

2022–2025	Renmin University of China Graduate: Quantitative Research Methods Undergraduate: Data Analysis with R; Social Statistics; Principles of Statistics
-----------	--

TECHNICAL SKILLS

Programming: R; Python (pandas, NumPy, scikit-learn); Git; Jupyter; R Markdown

Methods: Multilevel modelling; longitudinal and panel data analysis; complex survey analysis and weighting; latent-variable and mixture models; machine learning; simulation-based method evaluation; survey methodology and measurement; text analysis.

SERVICE

2022	Organizer, Computational Social Science Workshop Series Methods, modeling, and reproducible research in social science
------	--

AWARDS & HONORS

2024	Young Faculty Teaching Skills Award, Renmin University of China
2019	Innovation Prize, NPSO Innovatiedag, hosted by Statistics Netherlands (CBS)
2015–2019	China Scholarship Council (CSC) Doctoral Scholarship

LANGUAGES

English (fluent); Chinese (native); Dutch (B1+)
